Projects

Quiddler Assistant in C

Quiddler is a popular card game where one has a deck of cards comprised of one to two letter each and must use them to create a word. The score is calculated based on what letters you used to create the word. Quiddler helper was created as an aid to Quiddler players, it can calculate possible words to be created based on the input as well as how many points the word is worth.

Caesar-cipher in C++

Caesar cipher encryption technique created by Julius Caesar in an effort to protect classified documents. It works by shifting each letter of the message "x" amount of places from its position in the alphabet. This program has a take of Caesar cipher using a key that changes the amount each character is shifted per iteration. It is capable of encrypting messages as well as decrypting messages that it has encrypted
